Discussion:

N-pol will be down for a few hours as some software update work is being done. No echoes in range, none expected. So this is a good time to perform these tasks. IFLOODS will stand down from 7 PM tonight until 7 PM Saturday night. However, N-pol will operate in an autonomous mode during that period, running a 10 minute cycle for IFLOODS\_rain. IFLOODS personnel will monitor the weather during the 24 hour down period and could come back to normal operations if necessary. So that implies we will need an N-pol engineer to be on loose standby in case we need the radar. The same applies for D3R. Forecasts look real promising for midday Sunday through Monday night. Safety and power back up procedures have been reviewed here at N-pol.
